Endocrinology

Schedule of what to expect once you start ovulation induction

- Call when you get your period to schedule baseline tests.
- **Baseline Evaluation**
 - Takes place around Cycle day 3 (the day you get your period is Cycle day 1).
 - Example: You get your period on a Monday, day Wednesday is cycle day 3.
 - Baseline evaluation consists of **blood hormone tests**. Certain patients will also require an **ultrasound** to evaluate their ovaries and uterus at the beginning of the cycle.
 - The day of your baseline tests, you will see the doctor to make fertility treatment plan for the cycle.
 - **Fertility medication information**
 - *Clomiphene, Letrozole, and Progesterone* are medications widely available at your nearby pharmacies.
 - *Ovidrel* must be obtained from pharmacies that carry fertility medications.
 - **Fertility pharmacies near Boca are:**
 - Walgreens 3000 N State Rd 7, Margate, FL 33063
 - Phone: (954) 979-9083
 - South Miami Pharmacy 7500 NW 26th St, Miami, FL, 33122
 - Phone: (888) 846-6745
 - Will deliver medication to your home.
 - **Ovidrel administration instructions**
 - Visit this link for an instructional video on how to administer Ovidrel injection.
 - <http://www.freedommedteach.com/eng/videos.html?play=ovidrel>
 - **Mid-cycle visit**
 - You will have a mid-cycle follow up ultrasound visit to check for follicle growth and a blood test to evaluate hormone production. To be ready for ovulation with Ovidrel “trigger” shot, we are looking for at least one follicle that is ≥ 16 mm with corresponding estradiol levels around 200 pg/mL.
 - **Ovidrel (hCG) injection**
 - Ovidrel injection will induce final oocyte maturation and trigger ovulation when the ovarian follicles are mature.
 - We will instruct you when you are ready for this injection and when to take the injection.
 - **Timed Intercourse**
 - Couple will be instructed when to have intercourse.
 - **Vaginal progesterone**
 - Progesterone helps support the endometrial lining of your uterus to allow implantation to occur.
 - After you take the Ovidrel, you will be instructed on when to start vaginal progesterone.
 - **Pregnancy test visit**
 - Schedule your blood tests and visit about 16 days after Ovidrel was administered.
